#### Description

---

**Result message:** Using variable interpolation \${...} with github context data in a run: step could allow an attacker to inject their own code into the runner. This would allow them to steal secrets and code. github context data can have arbitrary user input and should be treated as untrusted. Instead, use an intermediate environment variable with env: to store the data and use the environment variable in the run: script. Be sure to use double-quotes the environment variable, like this: "\$ENVVAR".

## Description

---

**Result message:** Avoiding SQL string concatenation: untrusted input concatenated with raw SQL query can result in SQL Injection. In order to execute raw query safely, prepared statement should be used. SQLAlchemy provides TextualSQL to easily used prepared statement with named parameters. For complex SQL composition, use SQL Expression Language or Schema Definition Language. In most cases, SQLAlchemy ORM will be a better option.

## Finding 115: python.django.security.injection.tainted-sql-string.tainted-sql-string

Severity	EPSS Score / Percentile	Status	Date discovered	Age	Reporter	CWE
High	N.A. / N.A.	Active	May 19, 2025	61 days	(nursenkarabulut)	<a href="#">915</a>

## Location

Line Number

## Description

---

**Result message:** Detected user input used to manually construct a SQL string. This is usually bad practice because manual construction could accidentally result in a SQL injection. An attacker could use a SQL injection to steal or modify contents of the database. Instead, use a parameterized query which is available by default in most

database engines. Alternatively, consider using the Django object-relational mappers (ORM) instead of raw SQL queries.

## Finding 257: python.django.security.audit.avoid-mark-safe.avoid-mark-safe

Severity	EPSS Score / Percentile	Status	Date discovered	Age	Reporter	CWE
Medium	N.A. / N.A.	Active	May 19, 2025	61 days	(nursenkarabulut)	<a href="#">79</a>

### Location

Line Number

File Path
/src/dojo/templatetags/display_tags.py

### Description

**Result message:** 'mark\_safe()' is used to mark a string as "safe" for HTML output. This disables escaping and could therefore subject the content to XSS attacks. Use 'django.utils.html.format\_html()' to build HTML for rendering instead.

## Description

---

**Result message:** 'mark\_safe()' is used to mark a string as "safe" for HTML output. This disables escaping and could therefore subject the content to XSS attacks. Use 'django.utils.html.format\_html()' to build HTML for rendering instead.

## Finding 253: python.django.security.audit.xss.filter-with-is-safe.filter-with-is-safe

Severity	EPSS Score / Percentile	Status	Date discovered	Age	Reporter	CWE
Medium	N.A. / N.A.	Active	May 19, 2025	61 days	(nursenkarabulut)	<a href="#">79</a>

### Location

Line Number
14

  

File Path
/src/dojo/templatetags/as_json.py

### Description

**Result message:** Detected Django filters flagged with 'is\_safe'. 'is\_safe' tells Django not to apply escaping on the value returned by this filter (although the input is escaped). Used improperly, 'is\_safe' could expose your application to cross-site scripting (XSS) vulnerabilities. Ensure this filter does not 1) add HTML characters, 2) remove characters, or 3) use external data in any way. Consider instead removing 'is\_safe' and explicitly marking safe content with 'mark\_safe()'.

## Description

---

**Result message:** This code contains bidirectional (bidi) characters. While this is useful for support of right-to-left languages such as Arabic or Hebrew, it can also be used to trick language parsers into executing code in a manner that is different from how it is displayed in code editing and review tools. If this is not what you were expecting, please review this code in an editor that can reveal hidden Unicode characters.
